1 BASIC INFORMATIONS

All instructions delivered with products must be observed. We do not accept any warranty claim or liability for damage resulting from failure to observe these installation instructions!
Improper installation can cause injury and material damage!

The installation may only be carried out by a registered specialist.

Fireplaces equipped with a water boiler must be pressure-tested after hydraulic connection to the heating system. Masonry work may follow only after this pressure test. Ulrich Brunner GmbH does not cover any costs incurred by necessary dismantling of masonry for rework at water boiler installation or replacement of the boiler.

The floor space of the room must have a suitable structure and sufficient dimensions to ensure proper functioning of the fireplace.

Please note that other installation and assembly instructions are included in other packaging units!

Dimensioning of downstream heat accumulator must be according to valid stove-setting rules.

During installation of the fireplace, all dimensions and minimal clearances of the fireplace casing must be held as specified by the manufacturer.

Fireplaces that meet the requirements of DIN EN 13240 or DIN EN 13229 and that can only be operated as intended with closed combustion chamber door or that have a self-closing firebox door are suitable for multiple occupancy.

All binding national or EU standards and local regulations for the installation of fireplaces must be observed.

All valid stove fitting rules and regulations of local construction law must be observed and followed.

Please follow the relevant regulations of your country.

When these instructions are followed and all works are done properly, this will ensure a safe, energy-saving and environmentally friendly operation of the stove. Pictures shown are not to be considered as complete representations of any kind.

Subject to technical and assortment changes.

Please notify your supplier of any damage which might have occurred during transport.

Please keep these instructions.

Please also take note of the online product documentation provided by:

General instructions of the Brunner products installation for the stove construction.

(https://www.brunner.de/produktdownloads/kacheloefen-kamine/allgemeine-hinweise-fuer-den-aufbau_de.pdf) laden können.

2 APPLIANCE DESCRIPTION

The heating insert is tested in accordance with EN 13229 and can be installed with either a metal or ceramic post-heating surface. Direct connection of the heating insert to the chimney is not permitted.

The installation of a combustion air duct with outside air supply is possible with this heating insert.

The combustion air is supplied via a connection piece. The combustion air is set by the operator using a combustion air control element.

The appliances are suitable for operation in closed systems (hypocaust). The design of the hypocaust must ensure heat transfer and even heat distribution within the casing so that there is no overheating in the heating chamber at any point. The size of the heat-emitting cladding surfaces must be matched to the heat generator. The required insulation thicknesses specified in the technical data to protect the building surfaces adjacent to the fireplace have been determined for operation with open air grilles in continuous operation (safety test in accordance with EN 13229 - U-value of the test wall 0.7w/m²K) and must be supplemented by suitable measures (e.g. rear ventilation) if necessary.

The appliances in the WF_R series have a grate firing system with which either wood or lignite can be used as fuel. The desired fuel type is set on the appliance using a selector lever that can be reached at any time.

When using wood as fuel, please observe the information on log sizes and storage of firewood!

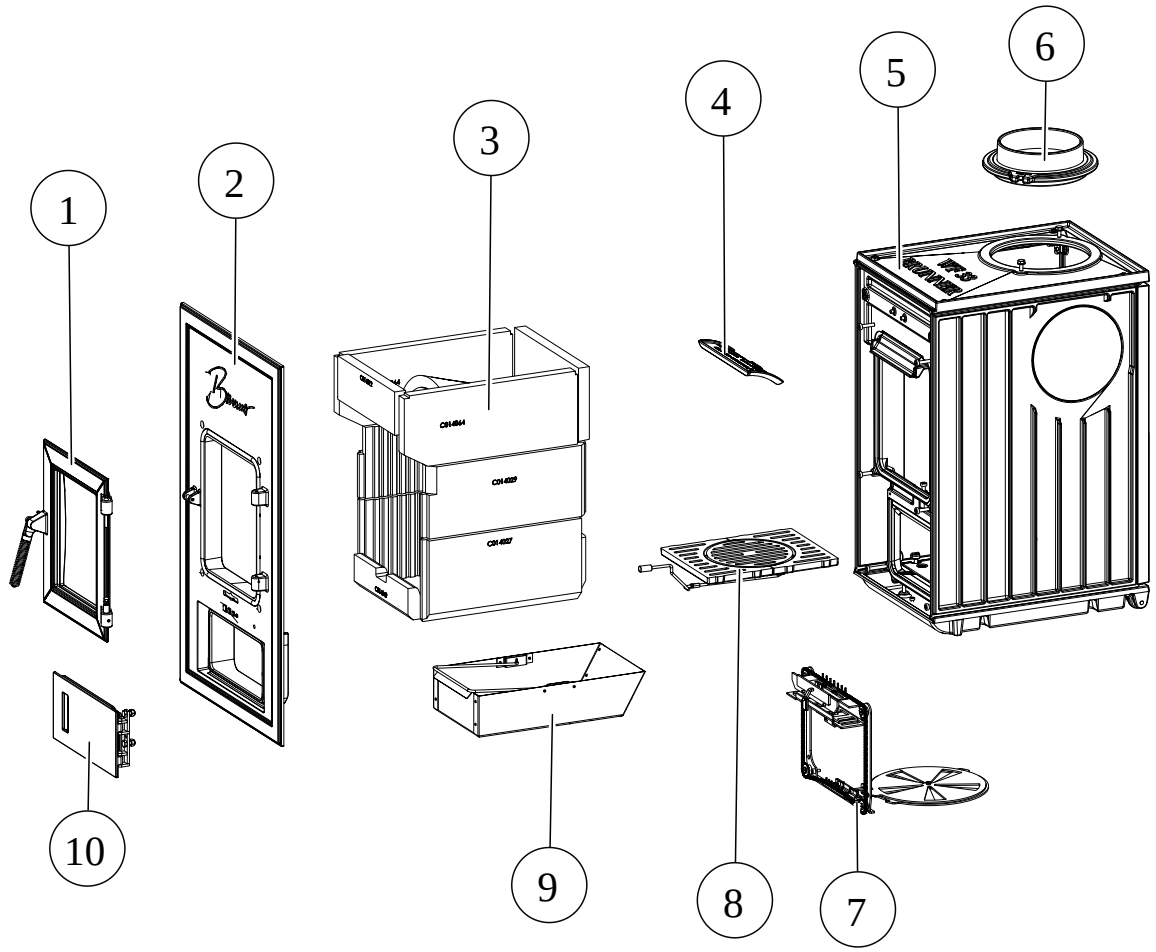

3 DELIVERY CONTENTS

The delivery consists of different packaging units depending on the configuration of the system.

4.10 SUPPORT BEARING (OPTIONAL) (N002088)

5 INSTALLATION

The WF 33 / $_{WFR}$ 33 can be installed with different reheating surfaces. The options range from prefabricated metallic or ceramic post-heating surfaces to a structure with individually created ceramic strips.

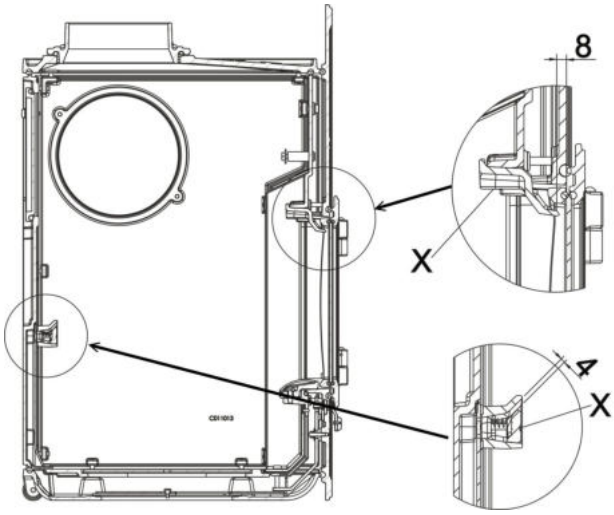

Always observe the technical regulations!

Ensure that the individual elements are permanently and firmly connected!

Sufficient cleaning options must be provided!

Combustion air setting

The combustion air is set at the factory. However, if a new setting is necessary, please observe the information opposite. The air gap is adjusted using the screws marked X.

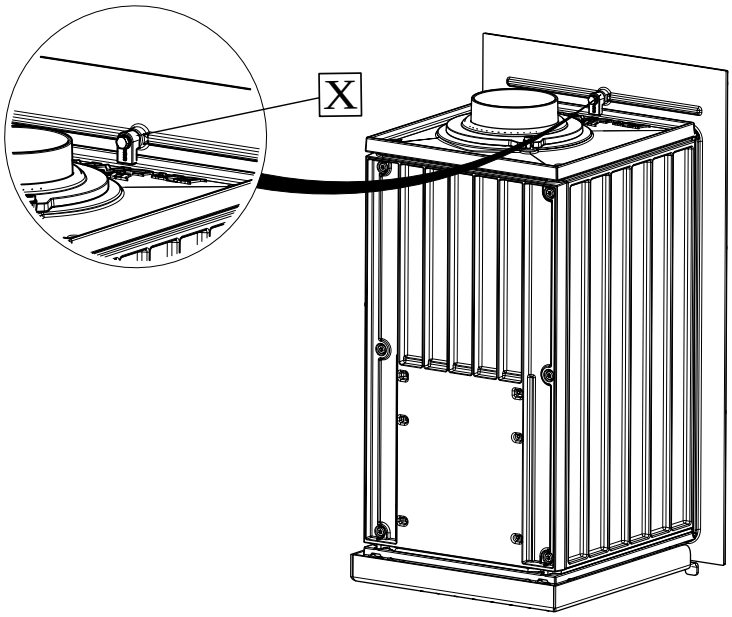

Im. 1: Combustion air setting

5.1 MOUNTING AID FOR CAST IRON DOME

The clamping bracket (X) is used to pull the cast cover forwards into the seal at the front plate during installation.

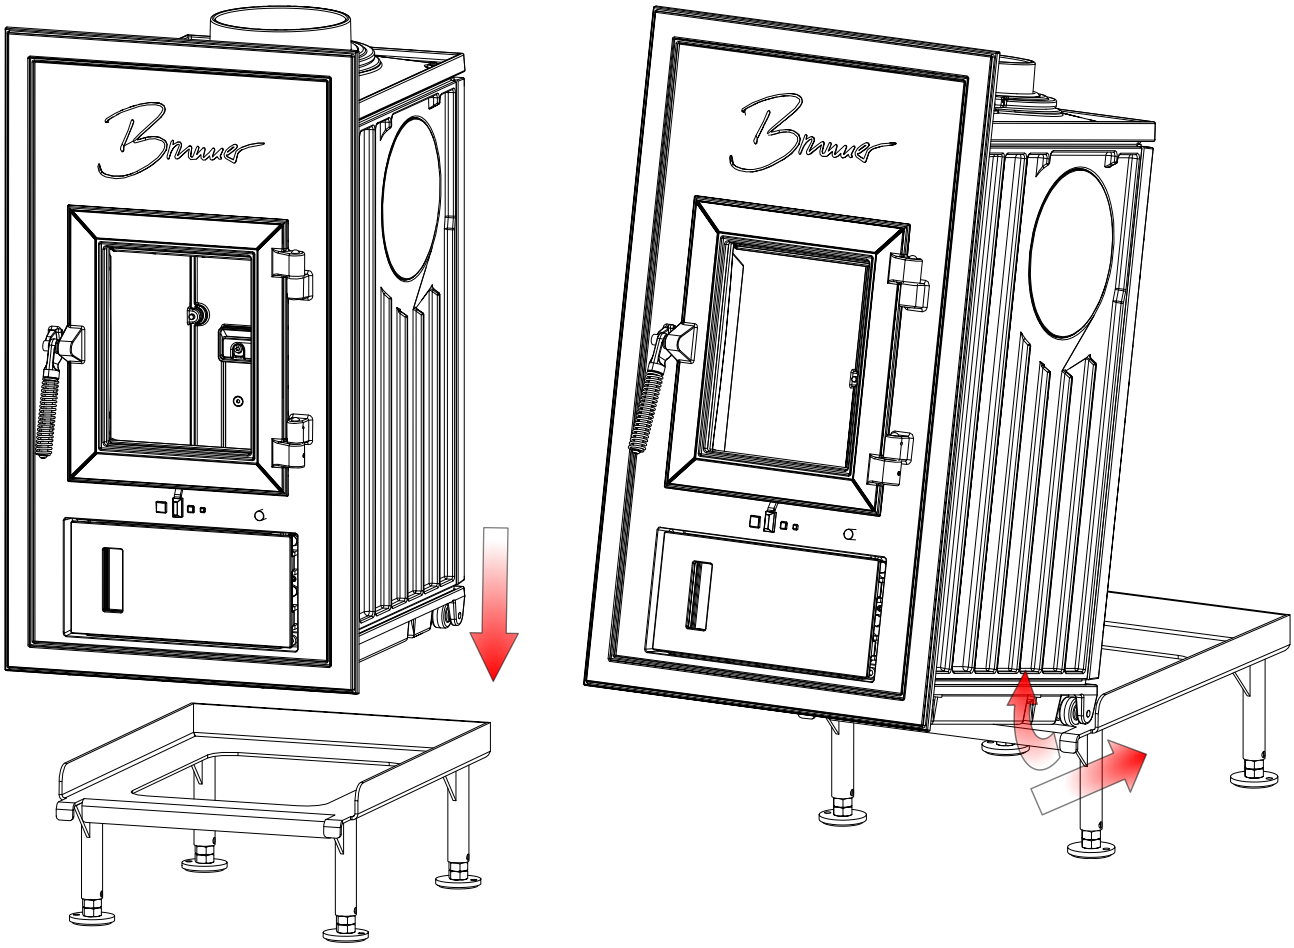

The clamping bracket can be removed once the cast iron dome has been fitted.

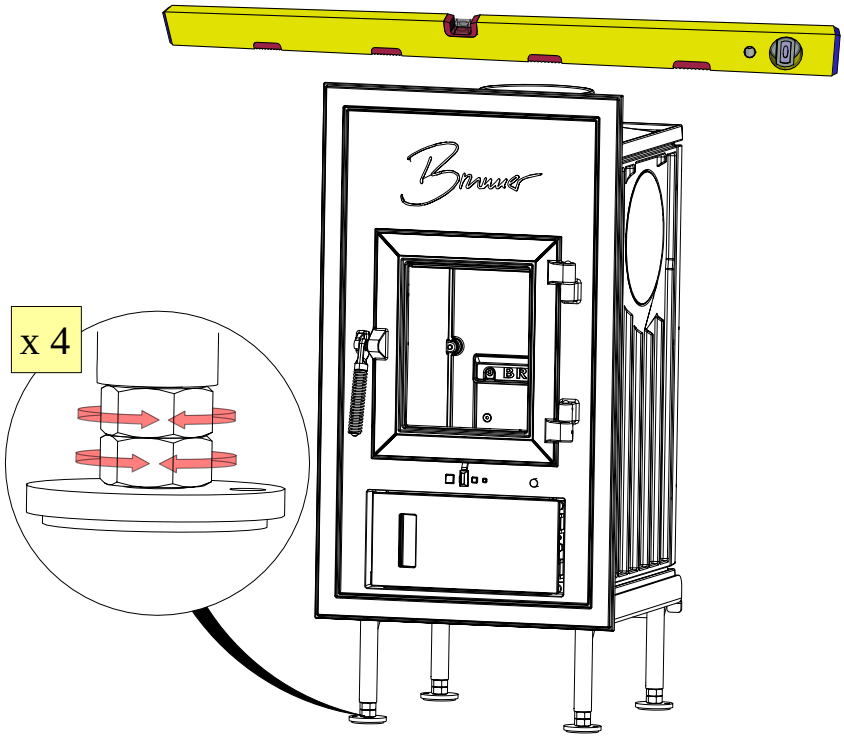

We recommend removing the clamping bracket, as the front plate cannot be removed from the front for servicing when the clamping bracket is fitted!

Alternative thermal insulation with heat protection sheetx) in front of insulation layer xx).
1 add-on wall (non-combustible), 2 Promasil 950KS, 3 hot-dip galvanized heat protection sheet (not black).

x) Heat protection sheet (no black sheet!) is attached to the insulation layer on site using spacers.

xx) Values determined with air cross-sections recorded by testing; stove envelope designed to dissipate heat.

We suggest for CAD planning Palette CAD. Permanent updated drawings: www.brunner.de
Frames/ flue gas outlet connection/ combustion air supply connection/ front variants/ support bearing are marked in color.

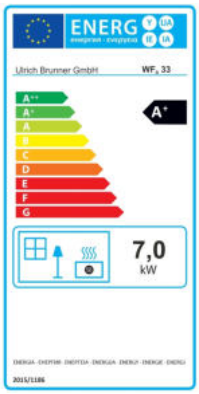

Planning and installation - WF_R 33

Tested according to		EN 13229 W	Lignite EN 13229
Values measured at		Rated power [1]	Rated power [1]
Suitable for all construction types according to rules		OK	OK
Data for functional demonstration			
Rated heat power	kW	7	7
Fire wood volume	kg/h	2.2	1.6
Combustion performance	kW	8.5	8.5
Flue gas mass flow	g/s	6.0	6.5
Outlet temperature (before reheating surface)	°C	470	435
Flue gas temperature after:			
1 x adjoining cast iron radiator (GNF 8)	°C	205	200
3,6 m ceramic accumulator [2]	°C	180	170
2,3 m accumulation stones (MSS) [2]	°C	180	170
Necessary supply pressure	Pa	12	12
Combustion air consumption	m^3/h	19	16
Combustion air connection Ø	mm	125	125
Heating gas temperature (before the hood/dome variant)			
insert flue outlet nozzle	°C	430	520
Heat distribution			
Insert / reheating surface	%	50 / 40	50 / 40
Glass pane (single / double)	%	10 / -	10 / -
Cross-section of gratings [3]			
exhaust warm air	cm^2	500 / 200 / 500	500 / 200 / 500
Recirculation air	cm^2	500 / 200 / 500	500 / 200 / 500
Minimal distances of the fireplace			
to cladding, insulation layer	cm	8	8
to mounting floor	cm	15	15
Thermal insulation without / with air gratings [4]			
Mounting wall	cm	14 / 12	14 / 12
Floor	cm	0	0
Ceiling	cm	22 / 17	22 / 17
Brick lining for combustible wall	cm	10	10
Weight			
Fireplace / combustion chamber	kg	150 / 47 / 197	
Meets requirement/limit values for:			
Germany/ Austria / Switzerland / Norway		1.BImSchV (Stufe 2) / 15a BVG (2015) / LRV / -	

1) Indications to “Rated power” determined with metallic reheating surface and Double elbow
2) Approximate value
3) for fireplace inserts / flue gas pipe / metallic reheating surface
4) Values determined with air cross-sections evaluated by testing; stove cladding is heat emitting.

Product data sheet according to (EU) 2015/1186:

Supplier's name or trademark	Ulrich Brunner GmbH
Model identifier:	WFR 33
Energy efficiency class:	A+
Direct heat output:	7,0 kW
Indirect heat output:	N.A. kW
Energy efficiency index:	108
Fuel energy efficiency (at nominal heat output):	82,0 %
Fuel energy efficiency (at minimum load):	N.A. %
Special precautions: see supplied product documentation
